MIMOTEN®

**GENERAL BIOFUNGICIDE THAT INHIBITS DISEASES AND PAMPERS YOUR CROPS
BY BOOSTING THEIR DEFENCES.**

MIMOTEN® is a potent general biofungicide based on concentrated extract of *Mimosa tenuiflora*. Recommended for the control of various fungal diseases such as mildew, powdery mildew, botrytis, powder rust, Fusarium, Sigatoka, etc...

MIMOTEN® is a multisite fungicide, which prevents the fungus from progressing by starvation by disrupting its enzymes. In addition, it has a phytotonic and defence pathway-inducing effect on the crop. It has a healing and preventive effect. Controls the disease 48-72 hours after the first treatment. "Zero Residue", it is suitable for organic and conventional farming.

**General organic
biofungicide based on
extract of *Mimosa*.**

**Control of disease and
disease progression by
direct action and starvation.**

**Defence inducer, with
phytotonic effect on
crops.**

You can consult **MIMOTEN®** as well as the rest of the Botanicals range here.

MIMOTEN®

Composition

- *Mimosa tenuiflora* extract 80 % w/w

Uses

- Foliar, fertigation and endotherapy. Repeated applications spaced according to the reproductive cycle of the pathogen are recommended.

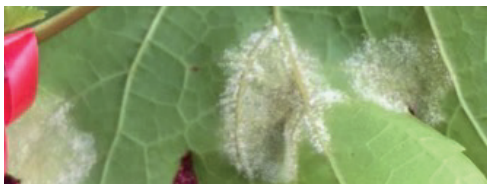

General dosage*

General fungicide:

- **Foliar:** 2.5-3.5 cc/L.
- **Fertigation:** 2-4 L/ha.
- **Endotherapy:** 5-10 cc/plant.

*The recommended uses, doses and biological targets will depend on the countries and registrations authorised for that product, so it is recommended in all cases to check the regulatory situation in each country prior to application.

EFFICACY TRIALS

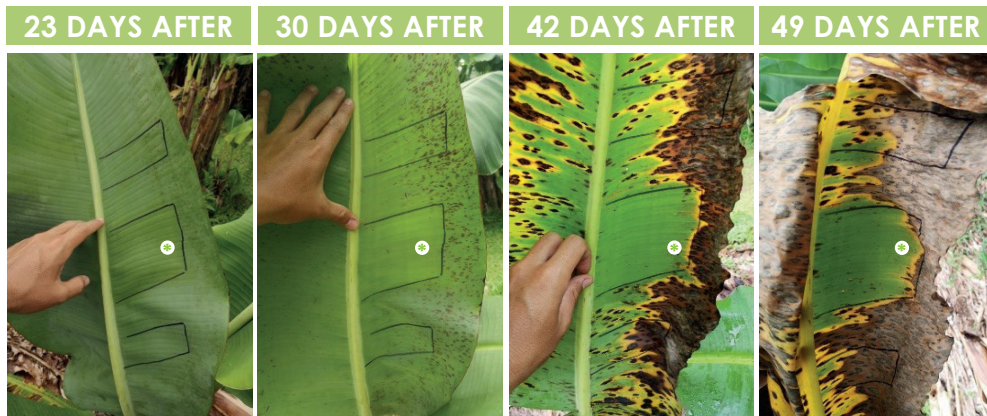

CONTROL
(prior to application)

MIMOTEN®
(3 days after application)

MIMOTEN® controls the advance of the fungal infection of downy mildew on vines, drying it out in 48-72 hours.

MIMOTEN® controls damage caused by black Sigatoka in banana and/or plantain crops (central box ✱).
