

ARCHER[®] FORCE

**INCREASES YOUR CROP'S NATURAL DEFENCES FROM WITHIN.
PLANTS MORE PREPARED FOR DISEASE ATTACKS AND STRESS.**

Archer[®] Force is a specific bio-stimulant that acts as a resistance inducer. It is composed of plant hydrolysates with a defined aminogram, focused on activating certain defensive metabolic pathways that together activate the plant's natural defence system.

Archer[®] Force enables plants to be better prepared for any abiotic and/or biotic stress, such as diseases or viruses, achieving improved performance in all processes. Moreover, when used in combination with fungicides, it has a synergistic effect, increasing their effectiveness.

**Activates the plant's
natural internal defence
systems.**

**Prepares the crop to
combat abiotic and
biotic stresses.**

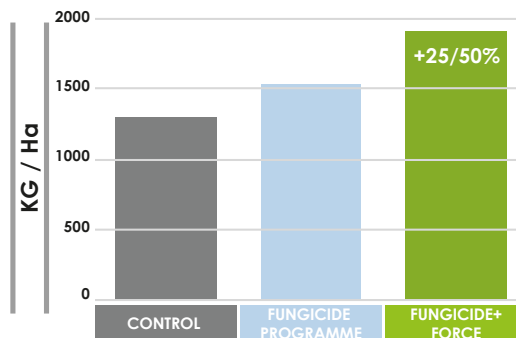

**Boosts the efficacy of
conventional treatments.**

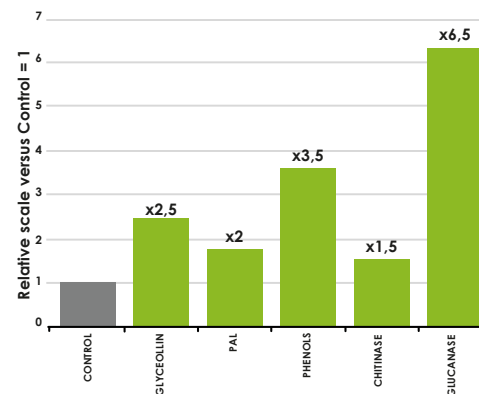

You can consult **Archer® Force** and all other Target Solutions here.

ARCHER® FORCE

YIELD

ACTIVATION OF DEFENCE PATHWAYS

Composition

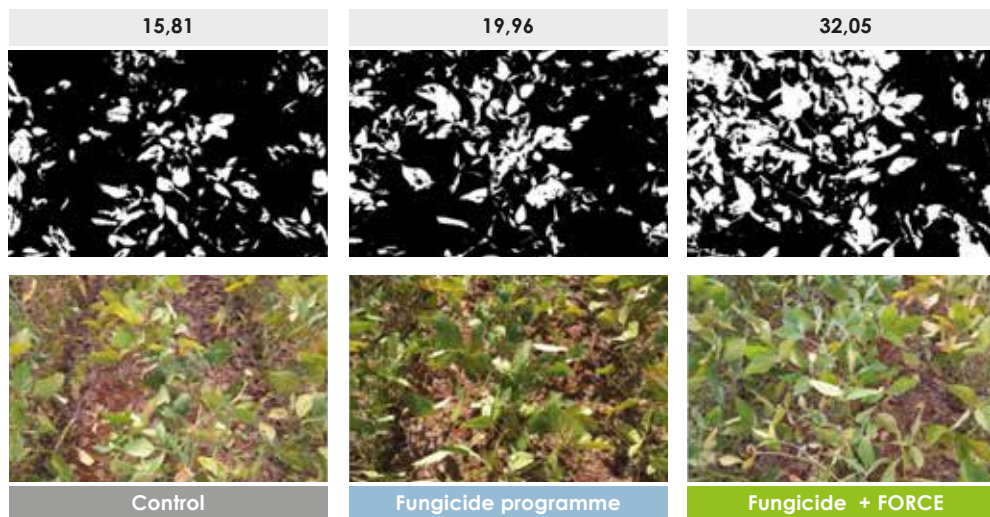

- 6 % (w/w) Free amino acids *
- 1,2 % (w/w) Total Nitrogen (N)
 - 1,2 % (w/w) Organic Nitrogen (N)

* Specific aminogram for the activation of the plant's defence systems.

Uses

- Mainly foliar, although it can be used by fertigation.

VEGETATION INDEX OF THE CROP

Archer® Force on extensive crops under fungal stress increases yields by 50% compared to a non-fungicide control, and up to 25% when used in combination with fungicides, reducing the occurrence of diseases.
